

Slovakian PM producer Gevorkyan expands into MIM production

Gevorkyan s. r. o., a Slovakian Powder Metallurgy parts producer based in the town of Banska Bystrica, has recently enhanced its production capacity with an investment in a MIM production line. The facility uses injection moulding technology from Arburg GmbH + Co KG, a debinding system from Lömi GmbH and a sintering furnace from Cremer Thermoprocessanlagen GmbH.

The company states that the primary materials processed are stainless and low alloy steels. Feedstock is sourced from PolyMIM GmbH.

Gevorkyan s. r. o. has been manufacturing a wide range of press and sinter PM parts, including bronze, bronze-iron and iron self-lubricating bearings, along with ferrous structural parts, since 1996. The company has also started the production of silver electrical contacts.

Sales in 2011 increased by 60% and in the coming years turnover is expected to enjoy three-digit annual growth. As a result, further investments are anticipated.

Gevorkyan s. r. o. was nominated

The Gevorkyan s. r. o. MIM facility

as "Plant of the year 2011" in Slovakia and has benefited from recent external technology and production assessments. "Our company has gained a lot from the independent assessment, identifying our strengths and weaknesses," stated Artur Gevorkyan.

"The company clearly appreciated this, because of the enormous pace and commitment with which we work, such an objective expert view from the outside helped us better identify the challenges ahead".

It's A Matter Of Choice

CM Furnaces, long recognized as an industrial leader in performance-proven, high temperature fully continuous sintering furnaces for MIM, CIM and traditional press and sinter now **OFFERS YOU A CHOICE**, for maximum productivity and elimination of costly down time.

Choose one of our exclusive BATCH hydrogen atmosphere Rapid Temp furnaces. Designed for both debinding and sintering, these new furnaces assure economical, simple and efficient operation.

OR... choose our continuous high temperature sintering furnaces with complete automation and low hydrogen consumption.

CONTACT US for more information on our full line of furnaces with your choice of size, automation, atmosphere capabilities and temperature ranges up to 3100°F / 1700°C.

On the leading edge of metal powder manufacture

With over 35 years' experience in gas atomisation, Sandvik Osprey offers the world's widest range of high quality, spherical metal powders for use in Metal Injection Moulding. Our products are used in an increasingly diverse range of applications including automotive, consumer electronics, medical and aerospace.

Our extensive product range includes stainless steels, nickel based superalloys, master alloys, tool steels, cobalt alloys, low alloy steels and binary alloys.

Using gas atomised powders can enhance your productivity and profitability: contact our technical sales team today for more information.
